UV bulb

CHECKING THE BULBS

It's important that you check the effectiveness of your UV, LED, UVLED bulbs for the more efficient work.

WHY IS IT IMPORTANT?

If the the bulbs are weak or if you are working with a lowpowered lamp, mistakes can occur or the results won't be durable: CrystaLac won't cure properly, get matte or rip off. Gels nails might cure well, but the result won't be long-lasting.

HOW CAN I TEST IT?

Apply 1 layer of Cool Top Gel to the nail or tip. If the edges are sticky after 2 min curing, where the lights are not direct, then the bulbs are weak. Important: in case of everyday salonwork, the UV, LED, UVLED bulbs need to be changed approximately every 6 months.

WHAT SHOULD I KNOW ABOUT LED, UVLED BULBS/LAMPS?

Even if you working with combined lamps (that means you put LED or UVLED bulbs to the Crystal UV Lamp) or the newest LED/UVLED lamps, you should consider the following facts and take our advises.

- Some white or light material (CrystaLac, Color Gels, some Top Gels) could turn yellow after curing in LED or UVLED lamps. This phenomenon caused by a chemical reaction but after approximately 10 minutes it will disappear after the product has cooled down and you will get the required color.

- We recommend you to keep your jars in a safe distance from your lamp. If you have a lamp which has a back, you can keep it behind it, if you have a backless lamp, keep it next to it with some distance because the light could get through the wall of the jars and damage the material inside. So make sure that you have your gels out of the light what comes from your lamp.

- Some materials will not cure in the light of LED. These are: Builder Clear Gel 1, Pink Builder Hard Gel, Builder Pink 1, Builder Pink 2, Antifungal Pedi Gel, and some of the color gels: most of the 200, 500, 600; Supernova, Fly-Brill, Moonlight Gels.

- The Tiger Eye Gels, the 3 Step colors, the Water Pro and 1 Step CrystaLacs are love the LED light. That means they don't flow around;

- the pattern on the surface of the Tiger Eye which was made with magnet;

- the dropped color-pattern on WaterPro CrystaLac;

- The 1 Step and 3 Step colors demand the LED or UVLED light for curing because of their consistency and pigments.

IMPORTANT: Know your lamp's qualities! Experiment before you get to use them on your everyday salonwork. It's crucial in case of ChroMirror Pigment Powders, Transferfoil Gels and other thick non-cleansing decorating material. Try to avoid the under-curing which means that you don't keeping your nails inside the lamp enough time to cure the materials. In these cases the products could be slippery or they could fall off from the nail plate. Also, you have to avoid the over-curing, because they could break easily.

CN advise:

Never stop checking your lamp or the bulbs in your lamp (depends on the lamp's type)! The best method is when you test your lamp at the first time, observe how much time does it takes to cure your builder gel! Usually it supposed to take 10-15sec. This is not a full cure time, this is for to make the material to that consistency to not to move for the working process. We recommend you to test your products in a monthly basis and if the curing time reaches the 20-30sec the bulbs/product needs to be changed. **IMPORTANT:** the test should have taken with already warmed up bulbs.
